

Simplex

Linux® Virtual Private Server (VPS)

Flexible VPS Hosting Plans

Many IT professionals associate dedicated hosting with management hassles. However, those that rely on our Linux® Virtual Private Server (VPS) know better. Virtualization software partitions the resources of a single, physical server between multiple users in such a way that each VPS receives most of the benefits and performance of a dedicated server — without the day-to-day hassles of managing a server.

Trust the VPS innovators

VPS technology was pioneered by our partners Verio*¹ over 10 years ago, based on the concept of a “virtual machine.”

- Virtual power – Despite sharing server resources, each VPS is fully isolated with its own file system, processes, users, applications and resource allocations.
- Total control – With VPS, you maintain complete control with the flexibility to install software and configure the server to meet your needs. You can even host multiple Websites with separate domains and unlimited email accounts.
- Expert management – Leading the competition in managed services, Simplex’s and Verio’s teams of Internet experts takes care of your Linux VPS, managing the data center, the network, the hardware, core software applications, security updates, and data backups. Our award-winning systems administrators are available 24/7.
- Premier reliability – Our long VPS experience led us to introduce FairShare technology, which carves CPU and RAM server resources into Virtual Resource Units, helping to balance server loads and make Linux VPS the most reliable choice.
- Multiple IPs –customers can buy additional IPs for use on a single VPS.

Linux VPS: The right services to meet your needs

- Robust Storage – Linux VPS plans offer 10 GB, 20 GB, 40 GB and 60 GB options.
- Enterprise-class Platform – Linux VPS is based on the Red Hat Enterprise Linux (RHEL) operating system to deliver the best of open source technology and the stability of a true enterprise-class platform.
- Versatile Application Support – Linux VPS supports a host of mission-critical applications and tools.
- Development Tools – Linux VPS supports thousands of applications and solutions. Using our quick and easy application installation system or the Red Hat Package Manager (RPM) open packaging system, you can be assured that the development tools you choose are supported.
- Simple Controls – A Web-based control panel makes account configuration and customization easy. Root access provides maximum control over applications and users.

We deliver peace of mind

When you power your applications with Linux VPS, you get the peace of mind of knowing your Websites and applications are running in our state-of-the-art data centers with ultra-fast Web connections through our global Tier-1 network.

You’re also backed by a team of award-winning technical experts who handle all the hardware maintenance and upgrades. We secure your server and data with triple data backups, system software updates, upgrades and security patches. The technical support engineers are available to you by phone and email around the clock.

*¹: Verio is a wholly owned subsidiary of NTT Communications, the world’s largest telecommunications company and is the global leader in domain and hosting services and owner of the world’s largest Tier-1 IP network.
