

Signature Standard Shared Hosting Plan

Signature Hosting is a revolutionary Internet hosting service with unparalleled flexibility. The well-thought out control panel has been designed with the end user in mind so that you can easily make real-time changes, upload and modify content, add users, change features, add/delete e-mail and ftp users, restore files, access usage statistics and more.

Signature Hosting also includes Webmail so that you can enjoy secure access to your e-mail from any computer connected to the Internet. Email accounts, forwards, aliases and auto-responders can be configured through a robust, easy-to-use interface. Incoming messages can be filtered using a spam filter as well as custom filters. In addition, you get server anti-virus software so that emails are scanned for viruses before they reach your workstations.

Signature Hosting delivers a level of security and customer privacy similar to a Virtual Private Server. This gives Signature users many advantages typically provided with more expensive private servers, and usually not offered with shared hosting. In addition to security, Signature offers its users high performance and flexibility with servers residing in Verio's⁻¹ state-of-the-art data centers, directly connected to the broadest global Tier-1 network in the world.

Finally, when your needs grow, there's nothing to worry about. The product's unique platform was designed with easy customer migration in mind. You can easily add more hosting space or request more bandwidth or even move to a totally new much more complex solution like a Virtual Private Server without affecting your business continuity.

For the complete set of features of the Signature Standard Hosting Plan, please see overleaf.

For more information on the services and solutions that Simplex Software & Internet Services Ltd. offers and how you could benefit, please contact:
